

Create a class Mobile with constructor and a method basicMobile().

Create a subclass CameraMobile which extends Mobile class, with constructor and a method newFeature().

Create a subclass AndroidMobile which extends CameraMobile, with constructor and a method androidMobile().

display the details of the Android Mobile class by creating the instance. .

```
class Mobile{  
  
}  
class CameraMobile extends Mobile {  
  
}  
class AndroidMobile extends CameraMobile {  
  
}
```

expected output:

Basic Mobile is Manufactured

Camera Mobile is Manufactured

Android Mobile is Manufactured

Camera Mobile with 5MG px

Touch Screen Mobile is Manufactured

For example:

Result

```
Basic Mobile is Manufactured  
Camera Mobile is Manufactured  
Android Mobile is Manufactured  
Camera Mobile with 5MG px  
Touch Screen Mobile is Manufactured
```

```
1 class Mobile{  
2     public Mobile(){  
3         System.out.println("Basic Mobile is Manufactured");  
4     }  
5 }  
6 class CameraMobile extends Mobile{  
7     CameraMobile(){  
8         System.out.println("Camera Mobile is Manufactured");  
9     }  
10 }  
11 public void newFeature(){  
12     System.out.println("Camera Mobile with 5MG px");  
13 }  
14 }  
15 class Android extends CameraMobile{  
16     public Android(){  
17         System.out.println("Android Mobile is Manufactured");  
18     }  
19     void androidMobile(){  
20         System.out.println("Touch Screen Mobile is Manufactured");  
21     }  
22 }  
23 class prog{  
24     public static void main(String args[]){  
25         Android o=new Android();  
26         o.newFeature();  
27         o.androidMobile();  
28     }  
29 }
```

Passed all tests! ✓

Create a class known as "BankAccount" with methods called deposit() and withdraw().

Create a subclass called SavingsAccount that overrides the withdraw() method to prevent withdrawals if the account balance falls below one hundred.

For example:

Result

```
Create a Bank Account object (A/c No. BA1234) with initial balance of $500:  
Deposit $1000 into account BA1234:  
New balance after depositing $1000: $1500.0  
Withdraw $600 from account BA1234:  
New balance after withdrawing $600: $900.0  
Create a SavingsAccount object (A/c No. SA1000) with initial balance of $300:  
Try to withdraw $250 from SA1000!  
Minimum balance of $100 required!  
Balance after trying to withdraw $250: $300.0
```

```
1 class BankAccount {  
2     private String accountNumber;  
3     private double balance;  
4  
5     public BankAccount(String accountNumber, double balance){  
6         this.accountNumber=accountNumber;  
7         this.balance=balance;  
8     }  
9  
10    // Method to deposit an amount into the account  
11    public void deposit(double amount) {  
12        // Increase the balance by the deposit amount  
13        balance+=amount;  
14    }  
15  
16  
17    public void withdraw(double amount) {  
18        if (balance >= amount) {  
19            balance -= amount;  
20        } else {  
21            System.out.println("Insufficient balance");  
22        }  
23    }  
24  
25    // Method to get the current balance  
26    public double getBalance() {  
27        // Return the current balance  
28        return balance;  
29    }  
30 }  
31  
32 class SavingsAccount extends BankAccount {  
33     // Constructor to initialize account number and balance  
34     public SavingsAccount(String accountNumber, double balance) {  
35         // Call the parent class constructor  
36         super(accountNumber,balance);  
37     }  
38  
39  
40     // Override the withdraw method from the parent class  
41     @Override  
42     public void withdraw(double amount) {  
43         // Check if the withdrawal would cause the balance to drop below $100  
44         if (getBalance() - amount < 100) {  
45             // Print a message if the minimum balance requirement is not met
```

```

44 *         if (getBalance() - amount < 100) {
45 *             // Print a message if the minimum balance requirement is not met
46 *             System.out.println("Minimum balance of $100 required!");
47 *         } else {
48 *             // Call the parent class withdraw method
49 *             super.withdraw(amount);
50 *         }
51 *     }
52 * }
53 *
54 * class prog {
55 *
56 *     public static void main(String[] args) {
57 *         // Print message to indicate creation of a BankAccount object
58 *         System.out.println("Create a Bank Account object (A/c No. BA1234) with initial balance of $500:");
59 *         // Create a BankAccount object (A/c No. "BA1234") with initial balance of $500
60 *         BankAccount BA1234 = new BankAccount("BA1234", 500);
61 *         // Print message to indicate deposit action
62 *         System.out.println("Deposit $1000 into account BA1234:");
63 *         // Deposit $1000 into account BA1234
64 *         BA1234.deposit(1000);
65 *
66 *         System.out.println("New balance after depositing $1000: $" + BA1234.getBalance());
67 *
68 *         // Print the new balance after deposit
69 *
70 *
71 *         // Print message to indicate withdrawal action
72 *         System.out.println("Withdraw $600 from account BA1234:");
73 *         // Withdraw $600 from account BA1234
74 *         BA1234.withdraw(600);
75 *
76 *         // Print the new balance after withdrawal
77 *         System.out.println("New balance after withdrawing $600: $" + BA1234.getBalance());
78 *
79 *         // Print message to indicate creation of another SavingsAccount object
80 *         System.out.println("Create a SavingsAccount object (A/c No. SA1000) with initial balance of $300:");
81 *         // Create a SavingsAccount object (A/c No. "SA1000") with initial balance of $300
82 *         SavingsAccount SA1000 = new SavingsAccount("SA1000", 300);
83 *
84 *         // Print message to indicate withdrawal action
85 *         System.out.println("Try to withdraw $250 from SA1000!");
86 *         // Withdraw $250 from SA1000 (balance falls below $100)
87 *         SA1000.withdraw(250);
88 *         // Print the balance after attempting to withdraw $250
89 *         System.out.println("Balance after trying to withdraw $250: $" + SA1000.getBalance());
90 *     }
91 * }

```

Passed all tests! ✓

create a class called College with attribute String name, constructor to initialize the name attribute , a method called Admitted(). Create a subclass called CSE that extends Student class, with department attribute , Course() method to sub class. Print the details of the Student.

College:

String collegeName;

public College() {}

public admitted() {}

Student:

String studentName;

String department;

public Student(String collegeName, String studentName,String depart) {}

public toString()

Expected Output:

A student admitted in REC

CollegeName : REC

StudentName : Venkatesh

Department : CSE

For example:

Result

A student admitted in REC

CollegeName : REC

StudentName : Venkatesh

Department : CSE

```
1 class College
2 {
3     protected String collegeName;
4
5     public College(String collegeNameP) {
6         // initialize the instance variables
7         collegeName= collegeNameP;
8     }
9
10    public void admitted() {
11        System.out.println("A student admitted in "+collegeName);
12    }
13 }
14 class Student extends College{
15
16     String studentName;
17     String depart;
18
19     public Student(String collegeNameP, String studentNameP,String departP) {
